

Ridge input/target geometry from the existing benchmark code path

ridge sees these rows
 $X = \text{EEG}[t_0:t_6, \text{channels}]$

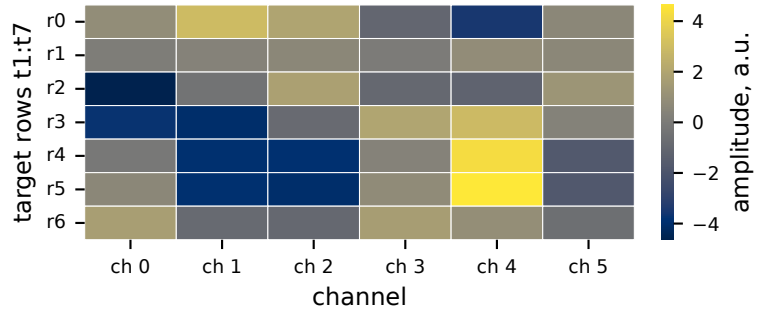

A. Future-state task: previous EEG time rows become ridge features

B. Design matrix slice X

C. Target matrix slice Y

Diagnostic note: generated from baseline_suite._make_paired_windows(seed=0). The versions evidence archive does not currently save raw EEG windows.
